

# STEEL CONDUIT

## Presidential Protection at the Clinton Library

### Steel Conduit Provides Added Security

With a presidential residence on the top floor, there are a lot of extra security systems throughout the building.

Steel conduit was used to provide added protection for voice, data and video communications circuits; alarm and intrusion detection systems; and security lighting, control and data centers.

Mike Alberson of IK Electric Company, the electrical contractor on the project, likes the shielding steel conduit provides against EMI/EMF. "With dozens of interactive displays and computers throughout the building, we were concerned about the possibility of electrical interference. One sure way to reduce the possibility is by using steel conduit", he explains.

### Make Everyone More Secure

Quality building and equipment security includes steel conduit. It's one security measure you can install cost-effectively on your next job. Find out more.
