

Steel Conduit.

The EMI Defense Shield

Steel conduit shields computers and other sensitive electronic equipment from electro-magnetic interference (EMI) caused by power distribution systems.

A three-year study by Georgia Tech proves that steel conduit can reduce EMI by as much as 95%.

New **G**rounding and **E**lectro**M**agnetic **I**nterference (GEMI)

analysis software, developed during the study, is now available, free of charge, to qualified users. It accurately calculates the electro-magnetic field density under specific conditions and allows the user to quickly calculate and size equipment grounding conductors.
